

Medium → How to use Hugging face API

How to use Hugging face API :

Step 1: Get your API token

Step 2: choose a model you like

↳ Main page of Hugging face → Models → choose a model

Step 3: Run the model in your application

↳ we need to setup the API in our code

↳ In Hugging face, the model will provide the direct code to use it

↳ click "Deploy" → click "Inference API" (serverless)

↳ In the next window, you can choose any programming language you like

Read token

A user access token that only grants read permissions

⇒ Allowing you to download and access public or private repositories on the Hugging face without the ability to modify or create new content

⇒ Ideal for scenarios where you only need to download or use pre-trained models hosted on Hugging face without making changes to them
